

The Orthopaedic Institute of Dayton

Kettering, Ohio

This medical office renovation took place while the facility was in full operation. Structures' personnel and subcontractors worked with the Owner's staff on a daily basis to eliminate disruptions to the Owner's schedule.

In addition, Structures' value engineering reduced the initial project cost by twenty percent. Structures then went on to perform this difficult project with zero change orders.

"Dave and Tim were honest, direct, and cooperative throughout the project.

It is with pleasure that I give Structures Building Solutions my highest recommendations."

-Gary Giffen, Administrator
