

New Subway Store

North Hampton, Ohio

Structures Building Solutions managed the construction of this new Subway Store located in North Hampton, Ohio.

The existing site had poor soil conditions which required the use of a special drilled pier foundation system. Structures guided the project through the selection of a specialty foundation contractor and the bidding and selection of the other trade contractors.

We also analyzed different building systems and made recommendations to the Owner based on our experience, cost, and perceived benefit of each system.

During construction, Structures provided on-site supervision and self performed the installation of many components of the building.
